

KustomNet™

Like DEMM systems, KustomNet provides a stable, proven, robust digital file management system, but also offers enhanced networking and digital asset management features. The software is scalable for a distributed wide area network using commercial Internet Protocol technology.

KustomNet uses client-server architecture in a Microsoft environment. The software is intuitive and easily navigated. Authorized users can quickly:

- Configure the network, including distributed file storage
- Control user access/security
- Automate retention policies
- Search/edit digital files
- Create case files
- View a detailed "chain of evidence"

Case files can easily include all associated digital information and are accessible across the network. The software enables combining of mobile and fixed digital video, audio, photos, and other related digital assets.

KustomNet will be most useful to agencies that have large fleets, multiple precincts, terabytes of data dominated by video files, and an IT organization.

KustomNet Scales Easily

Administrative functions such as adding vehicles, officer names, KustomNet user names, etc. are supported by an easy to use graphical user interface.

Storage can be easily increased by adding a Storage Attached Network (SAN) or Network Attached Storage (NAS) device.

Multiple Remote Ingestion Sites

Whether for a large local police department, sheriff's office or statewide agency, KustomNet supports an unlimited number of remote ingestion sites.

De-Centralized Storage

Considering the cost of the high speed network equipment needed to send video to a centralized storage facility and the fact that 95% of the video is never used in court, the cost of centralized storage is generally impractical. De-Centralized storage, at the points of ingestion, is one of the least-cost alternatives.

City or State-Wide User Access

KustomNet gives all authorized users easy access to full video search and play back functionality.

KustomNet supports Microsoft® Active Directory (LDAP) for user and server policy authentication.

KustomNet Configured with De-centralized Storage Strategy
